MVT

AURY Africa (Pty) Ltd

Vibratory Technology

Specialists in the design & manufacture of innovative vibratory screening and feeding equipment. Our machinery is designed to be extremely durable, deliver excellent output and cost-effective to maintain.

Products:

- Sizing screens
- Multislope screens
- Dewatering screens
- Pan and tube feeders
- Grizzly feeders
- Drawdown hoppers
- Spiral elevators

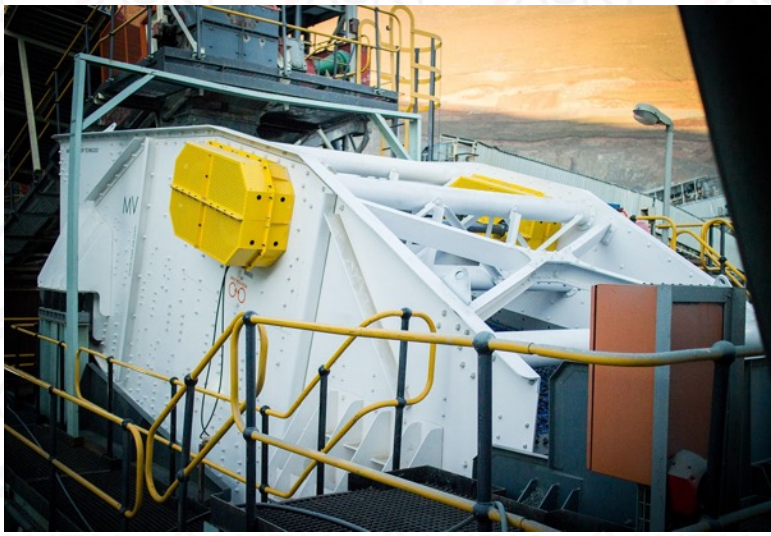

All our equipment is manufactured to ISO 9001 standards with our POD drive arrangement being a unique and highly efficient means of driving large screens and grizzly feeders (up to 32tons in manufactured weight). Our largest screen is currently a 30X14ft double deck.

Features & Benefits:

1. Prevents screening of slabby material (resulting from grizzly bars), by screening only 120mm lumps using custom-designed heavy duty rubber panels.
2. Opens up the potential for a greater variety of underground vibratory equipment, as this concept can be applied across our range of screens and grizzlies.
3. Enables an easier underground assembly of vibratory equipment.
4. The POD drive system (flange-mounted exciters) provides a significant weight and cost reduction, as the PODs do away with heavy, costly drive beams and geared exciters.

Customisations Offered:

- Fit existing steelwork.
- Maximise output under current constraints.
